

UPDATING A NESTED IES FILE IN A REVIT PROJECT

1.0 IES files are nested deep in the Revit families.

2.0 To edit/update an ies file, select a luminaire in a project file (.rvt) > select Edit Family

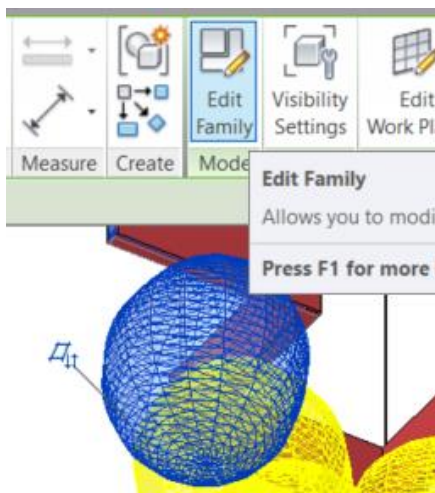

3.0 In the Revit Family, select the group you want to edit > Edit Group

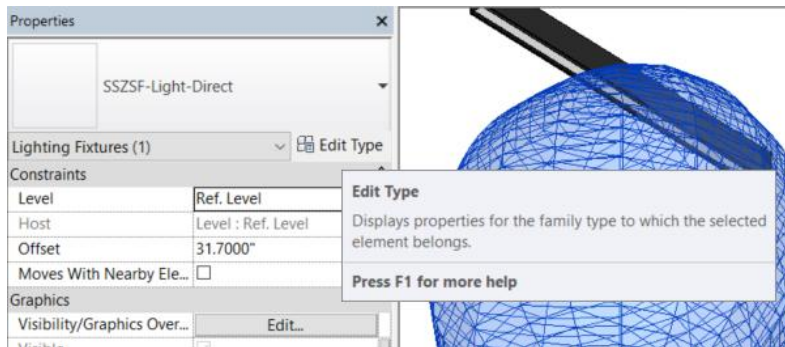

4.0 In the Edit group, select the fixture you want to edit > select Edit Family

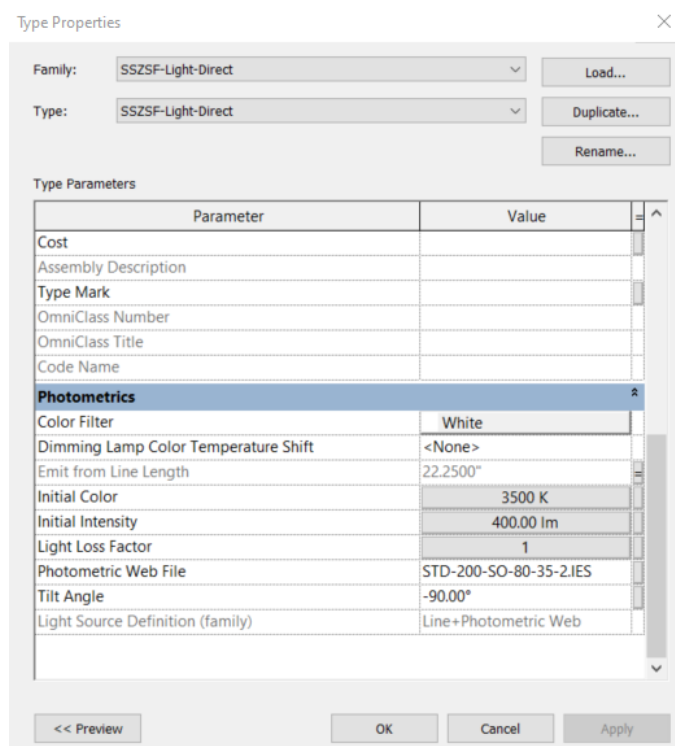

5.0 In the nested Revit family, select the IES file > select Edit Family

6.0 In the nested Revit family, select the IES file > select Edit Type in the Properties dialog

7.0 In the Type Properties dialog, scroll down to the Photometrics

8.0 Click the Browse button (displays after you click the Photometric Web file field)

9.0 Navigate and select the desired IES file.

10.0 Edit Initial Color, Initial Intensity, Light Loss Factor that corresponds to the IES file.

11.0 Load the nested family in the next nested family (sequential) until you reach the topmost Revit Family.

12.0 Save the Revit Family as another file.

13.0 Load the Revit Family in a Revit Project file.
